This document contains the following sections:

Important Features, page 2

## Important Features

This release includes the following features of the Adapter's functionality:

Issue #	Modification
Sovos Adapter for Magento (DST-967) (DST-1253) (DST-1265)	With this release, the Sovos Adapter for Magento now allows users to choose between the TWE and Taxify tax engines.
Sovos Adapter for Magento (TC-2372)	With this release, the Adapter makes Shipping Costs its own separate line item to have more granular control over shipping discounts.
Sovos Adapter for Magento (DST-966)	With this release, the Adapter supports item level exemption in Taxify so that when an item is mapped to an item category that invokes an exemption, the item will return 0 tax amount. If it does not invoice an exemption, the Adapter will return the correct tax amount. If the item is not mapped, then the tax amount returned will be the standard rate.
